PROGRAMMABLE RAMP AND SOAK PROCESS & TEMPERATURE CONTROLLERS

NOVA PD550 Series

- Thermocouple, RTD, & Process Inputs
- High Accuracy Auto-Tuning PID
- Two Ramp & Soak Programs, 15 segments each
- Universal Power Supply 100-240 VAC
- Up to 3 Relays & 2 Analog Outputs
- Digital Input Program Operation
- RS-485 Serial Communication Option
- Modbus® RTU/ASCII Communications
- Free Operating & Data Logging Software
- IP55 & IP65 Fronts
- 1/16, 3/16, 1/8, 1/4 DIN Sizes
- 3 Year Warranty

PRECISION DIGITAL CORPORATION

www.predig.com
DISPLAYS & PROGRAM OPERATION
Programmable Controllers have dual four-digit LEDs and runs set point programs controlled from the main operation displays.

Program Operation
Programs are controlled through the front panel buttons without the need to enter the setup menus to use simple commands.

Main Operation Display
- PV window displays process variable
- SP window displays current set point or $k_oP$ if no program is running
- Press the P1 button to run program 1
- Press the P2 button to run program 1
- Hold the RST button to stop a program
- LEDs to indicate the current program, relay status, auto tuning, and program holds
- Press SET/ENT button to switch to the next display window

% Output Display
SP window displays the operating level of the control output as % of full scale.

Run Status
Displays the remaining running time for the active program segment.

Segment Step
Turn on to immediately move to the next program segment.

Program Hold
Turn on to put the program on hold and to maintain the current set point.

EASY SETUP & PROGRAMMING
All programming of a Nova Digital Controller is done through the front panel. No switches or jumpers are required.

Front Panel Buttons
- Press the SET/ENT button to confirm an entered value. Hold the button for 3 seconds to enter or exit the setup menus or to access the next parameter when in a group.
- Press the Up button to increase numerical values or scroll through parameter options and group menus.
- Press the Down button to decrease numerical values or scroll through parameter options and group menus.
- Press the LEFT button to move to the next digit during numerical value programming.
- Hold the P1 button for one second to run program 1.
- Hold the P2 button for one second to run program 2.
- Hold the RST button for one second to stop a program.
Note that on some models one button may have several functions, such as an Up/P1 button.

Menus and Groups
Parameters are split into two menus, a program menu and a setup menu. The program menu contains all the parameters needed to construct two 15 segment set point programs. The setup menu contains the groups and parameters to configure the inputs, outputs, alarms, and all other settings for controller operation.

Program Menu
The program menu is arranged in three sections. Group 0 is for general program characteristics, such as time units and set point wait zones. Group 1 and 2 are to build programs 1 and 2.

*This group menu appears only on models with the appropriate options.

For a complete list of setup parameters, their functions, and setting options, refer to the PD550 Series Instruction Manual.

Menu Password
A user defined lockout password must be entered to access certain group menus. Enter the password at the prompt when navigating the group menus by pressing the SET/ENT button. The default password is 0.
NOVA PD550 SERIES PROGRAMMABLE RAMP & SOAK CONTROLLERS

PROCESS & TEMPERATURE INPUTS
Nova Controllers use a single universal input that accepts process and temperature inputs.

RTD: Pt100 (0.00385), JPt100 (0.00392)
Process: -10 to 20 mV, 0 to 100 mV
0.4 to 2 V, 1 to 5 V, 0 to 10 V
4 to 20 mA input with a resistor shunt

VERSATILE OPERATION
Powerful standard and optional features such as universal inputs, up to three relays and two analog outputs, digital inputs, and serial communications make the controller applicable for most process or temperature control applications.

Programmable Relays
All PD550 Series controllers have a standard 3 A Form C (SPDT) relay. Up to two additional 1 A Form A (SPST) relays may be added. All relays can be programmed for numerous control or alarm functions.
- Time-Proportional PID Control
- PV or SP Zone Alarms
- Program Segment or End Alarms
- High, Low, and Deviation Alarms
- Fail-Safe and Standby Alarms
- Alarm Delays and Deadbands

Analog Output Configurations
Up to two analog outputs are available on all PD550 Series controllers. Each analog output can be programmed independently, and numerous output types are selectable.
- 4-20 mA PID Control
- 4-20 mA Retransmitting
- Time-Proportional PID Voltage Pulse

Auto-Tuning PID
A high accuracy auto-tuning function using Fuzzy Logic calculates the PID values for your system with the push of a button, eliminating the need for complex PID calculations and time consuming setup. After several on/off cycles, the PID values will be set automatically.

Gain Adjustment
Through the use of a user programmable Gain parameter, simple adjustments to system control characteristics can be done easily. Increasing the Gain will increase accuracy and reduce overshoot. Lowering the Gain will let the system reach the set point faster.

Ramp & Soak Programming
All PD550 Series controllers can store up to two programs of 15 ramp or soak segments each. These programs have a variety of features and are easy to build.
- 2 Programs of 15 Segments Each
- Specific Program Segment Alarms
- At Program End, Stop, Hold, or Link to Another Program
- Repeat Segment Chains
- SP Wait Zone and Time for System Accuracy

Input Bias Adjustment
Up to five bias points can be used to provide precise offset adjustments at specific input values. The controller will use the offset to create a smooth input value curve leading up to the bias points.

Digital Input Set Point Selection
Two digital inputs can be added as an optional feature. Digital inputs are activated by closing contacts on the back of the meter with a switch or relay. The configuration of the two inputs can be used to control or run programs.

Normally open switches (external excitation not required) or open collector transistor
**Inner Signal Zones**

Two inner signal zones can be configured to activate when the PV or SP are within or outside user defined high and low band values. Relays and digital outputs can be configured to activate with these inner signal zones.

**Digital Outputs**

Up to four digital outputs are available as options. These outputs can be configured to activate based on alarms, PV or SP zones, or set point program behavior (ramp up or down, soak, specific segments, program run or end).

**Serial Communication & Adapters**

PD550 Series controllers with the serial communication option can be used for data acquisition, Sync master set point control, or Modbus communication (RTU and ASCII). The Nova controllers transmit via RS-485. RS-232/RS-485 and USB/RS-485 converters are available for use with the Nova Multi-Monitoring software or other PC applications.

**Sync Master Set Point Control**

PD550 Series Programmable Controllers with the serial communication option can use Sync set point control. By connecting controllers together using the RS-485 serial communication capability, one controller can control the set point of an entire string.

![SYNC Master](image)

Use one PD550 Series Programmable Controller to control the set points of PD540 Series controllers. Set point changes through the program are copied by all PD540 Series slave controllers.

**NOVA PC SOFTWARE**

Any Nova Controller with the serial communication option can be configured to interface with the Nova Multi-Monitoring PC software.

- Easy to Set Up and Use
- Connect up to 30 Nova Controllers
- View PV, SP, and Alarm Status Simultaneously
- Build and Run Ramp and Soak Programs
- Log, View, and Save Data in Spreadsheet Files
- Free Download from [www.predig.com](http://www.predig.com)

**Specifications**

**System Requirements:** Windows® 95/98/ME/2000/XP

**Communications:** An RS-485/RS-232 or USB/RS-485 converter may be used for communication with a PC and Nova Multi-Monitoring Software.

**Number of Units:** Up to 30 Nova Controllers

**Baud Rate:** 9600 bps to 19.2 kbps

**Data Logging:** Graph and save data as .hdr format. Each controller saves graphs independently. Data exportable in spreadsheet format.

**Logging Interval:** 1 second to 24 hours

**Simultaneous Monitoring**

Simultaneously monitor up to 30 Nova Controllers and view the PV, SP, and alarm status for all connected controllers. The main view screen also displays the basic model numbers of all connected units. Any series of Nova Controllers with the serial communication option may be monitored with this software.

**Remotely Operate Programs**

Run the two set point programs though a detailed operation screen available for every connected controller. Allows for remove program run and stop, hold, skip, and auto-tuning features.

![Simultaneously View Up to 30 Nova Controllers](image)

Monitor and Control Set Point Programs
**Data Acquisition**

PV and SP data can be logged independently for each unit. This data can be graphed using the Data Viewer for quick and clear analysis. Logged data can be exported into spreadsheet format.

**Program Editing**

Set point programs can be quickly and easily built through the Program Editor. These programs can be saved as independent files as well as downloaded and uploaded to any connected PD550 Series controllers.

Front Panel: Panel gasket provided
1/16 & 1/8 DIN: IP65
3/16 & 1/4 DIN: IP55

Programming Methods: Four front panel buttons and Modbus

Number of Set Points: Four programmable set points

Noise Filter: Programmable 1 to 120 seconds, or off

Display Update Rate: 4/second

Non-Volatile Memory: All programmed settings are stored in non-volatile memory if power is lost.

Power: 100-240 VAC, 50/60 Hz, 10 watts

Required Fuse: UL Recognized, 1 A, 250 V, slow-blow

Isolation: 500 V input-to-output-to-power line; 4 kV relay output-to-input/output/power line

Operating Temperature: 10 to 50°C

Storage Temperature: -40 to 85°C

Relative Humidity: 20 to 90% non-condensing

Enclosure: 1/16, 3/16, 1/8, & 1/4 DIN available. Color: black

UL File Number: E244207; Process Control Equipment

Warranty: 3 year parts & labor

Extended Warranty: 1 or 2 years, refer to Price List for details

Temperature Inputs

Inputs: Factory calibrated, field selectable: J, K, T, E, B, R, S, L, U, N, W, and Platinum II thermocouples and 100 Ω platinum RTD (0.00385 or 0.00392 curve)

Cold Junction Reference: Automatic or off

Offset Adjustment: Four programmable input bias zones

Sensor Break: Up or down scale, user selectable; display reads S.OPN; alarm relays will follow the up or down scale selection.

*Performance within recommended operating conditions (10 to 50 °C, 20 to 90% RH)

Process Inputs

Inputs: Field selectable: 0.4 to 2.0 V, 1 to 5 V, 0 to 10 V, -10 to 20 mA, 0 to 100 mA. 4-20 mA input with 100 Ω resistor.

Accuracy: ±0.1% FS ±1 count

Decimal Point: Up to 3 decimals: 9.99, 99.99, 999.9, or 9999

Calibration: All inputs are calibrated at the factory

Scale Range: User programmable over entire range

Relays

Ratings: 1 Form C (SPDT) standard, rated 3 A @ 30 VDC or 3 A @ 250 VAC resistive load. Up to 2 Form A (SPST), rated 1 A @ 30 VDC or 1 A @ 250 VAC resistive load.

 Relay Operation: Time proportional PID control, forward or reverse (fail-safe) alarms, inner signal PV or SP zones, program segment time signals, or program run or end alerts

Cycle Time: 1 to 300 seconds; time-proportional PID control only

High/Low Alarm: User may program any alarm for absolute high or low trigger values.

Deviation Alarm: User may program any relay for high, low, or high/low range set point deviation alarm.

Alarm Deadband: 0-100% FS, user selectable

Alarm Delay: 0 to 99 minutes and 59 seconds

Reverse Operation (Fail-Safe): Programmable, independent for each alarm.

Relay coils are energized in non-alarm condition. In case of power failure, relays will go to alarm state.

Inner Signal Zones: Relay activates based on inner signal 1 and 2 states.

Time Signal: Relay activates during program segments with time signals.

Program End Alert: Relay activates for 15 seconds following reset at program completion.

Auto Alarm Initialization: Normal and standby operation independent for each alarm. Normal alarms will reflect the state of the input to the controller at all times. Standby alarms will not trigger if the change to alarm state is a result of power up cycle, set point change, or alarm configuration change.

Analog Outputs

Scaling Range: Retransmitting 4-20 mA outputs can be scaled for any display

Accuracy: ±0.1% FS

Availability: 1/16 & 3/16 DIN: 1 standard, 1 optional

1/8 & 1/4 DIN: 2 standard

Output Operation: 4-20 mA PID control, time-proportional voltage pulse PID control, or 4-20 mA retransmitting

Ratings: Continuous 4-20 mA PID or retransmitting: 600 Ω max

Time Proportional PID: 15 VDC pulse high, less than 0.1 VDC pulse low; 600 Ω minimum, current limited at 30 mA

Cycle Time: 1 to 300 seconds; time-proportional PID control only

Power: Internally powered 4-20 mA output

Isolation: 500 V input-to-output-to-power line; 4 kV relay output-to-input/output/power line.

Output Loop Resistance: 600 Ω max

Digital Inputs

Configuration: Two contacts, two operating modes

Contacts: Normally open switches (external excitation not required) or open collector transistor

Open Circuit Voltage: Approximately 5 VDC

Logic Levels: LO = 0 to 0.8 VDC, HI = 4.7 to 28 VDC

Operation: Mode 1: Program hold and step; Mode 2: Program run or reset.

Digital Outputs

Configuration: 2 or 4 open collector transistor

Operation Modes: Alarms, inner signal PV or SP zones, program segment time signals, SP status (ramp up/down or soak), program run or end alerts

Transistor Rating: 24 VDC @ 50 mA

Serial Communications

Protocols: PC, Modbus (ASCII, RTU), Sync (Master/Slave SP Control)

Address: 1 to 99 (Max 31 units connected)

Baud Rate: 600 to 19,200 bps, user selectable

Transmit Time Delay: 0 to 100 ms

Data: 7 or 8 bit, automatic when using Modbus protocol

Stop Bit: 1 or 2

Parity: None, even, or odd
